## Why switch to our artificial turf?

### Australian made, superior technology

All our products are Australian made by APT (Advanced Polymer Technology) in Dandenong South, Melbourne. APT yarns are purpose suited to Australasian conditions, manufactured with ISO quality assurance, continuously tested and backed by a generous warranty.

### Child-safe

All our turfs are free of unsafe chemicals and are soft to touch and play on. Our products are widely used in schools, child-care centres and playgrounds. We also offer soft shock pad underlay when installing the grass for added cushioning and protection.

### Pet-friendly

Your pets will love their new lawn. They are soft under paw, non-toxic and durable with a strong perforated backing to allow liquid to drain. Our Pet Premium turf is specifically designed with double perforations in the backing for exceptional drainage and high-density tufting for ease of collecting pet waste.

### COOLplus® Technology

In the same way dark clothing absorbs more heat than light clothing, artificial grass can also trap heat. However our artificial turfs feature COOLplus® Technology, which is proven to lower temperatures by reflecting sunlight. Infrared reflective pigments within our weave, slow down heat build-up making them up to 20% cooler than similar products.

### Superior drainage

Water (and other liquids) drain right through the surface at a rate of 2000mm per hour. The punch hole system on the backing of our surfaces quickly allows water to pass through the pile into the ground below reducing the occurrence of puddles and stains.

### UV Stabilised

Inferior quality grasses may not provide protection against intense sunlight and weathering. Our premium quality yarns are specifically designed for Australian conditions with protection against harsh UV rays and come with an up to 15 Year Warranty. You can feel confident that you have chosen the best synthetic grass on the market.

# Our most popular grass types:

## Comfort Plus

## Keep your cool!

Our lawn's COOLplus Technology keep your turf cooler, it also adds a finish to each grass fibre that reduces the 'shiny' appearance, is softer to touch and less abrasive than other artificial grasses.

Here are some things you should know about Keeping it Green.

I'll be there in person to ensure that the job is done to the highest standard. I don't send in unsupervised contractors. The best part of my job is seeing the look on my client's face when the job is done, it's the reason I do what I do.

We don't stuff around. Once we start, we stick with the project until it's completed. The only time we'll leave before completion is if the weather turns nasty. And we won't leave you in a mess and we'll communicate with you throughout. I guarantee is you'll be thrilled when we're finished.
